- CRJ-900NG
- Fokker 50
- SAAB 340

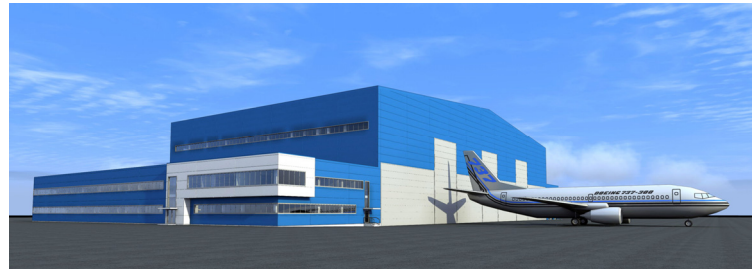

Modifications

Component Maintenance

Non Destructive Testing – NDT

Engineering Services

Logistics and Material Support

Air Maintenance Estonia expands its capabilities

Based at Tallinn Airport, the Estonian MRO Air Maintenance Estonia – AME, is now in the process of a major expansion of its capabilities.

- From August next year, AME will have a new three bay hangar for Base Maintenance works, says AME's COB and CEO, Lars-Olof Bolinder. In total we will have three main Base Maintenance lines, and two additional lines for lighter checks and modification works.

- We will also add the Airbus 320 family to our Base Maintenance capability list, currently including Boeing 737 Classic and 737 NG. As for Line Maintenance, AME is already certified for the A320 family, as well as B737 Classic & NG, CRJ-900NG, Fokker 50 and SAAB 340.

- At AME we usually define our potential geographical market as being within some two hours ferry flight time from our location at Tallinn Airport. This means that, in addition to the Baltic and Nordic markets, we also cover Northern Europe, as well as a good part of Central Europe and Western Russia, says Lars-Olof Bolinder.

AME's market driven expansion goes hand in hand with Estonia's equally solid development on the international markets.

Being an EU member since 2004, Estonia's GDP growth is among the highest and its foreign debt among the lowest in the EU. More or less simultaneous to Standard & Poor's downgrading of the US credit rating this summer, the very same rating agency upgraded Estonia to an AA- level, putting the country in the second best so called high grade global rating group.
